**FACILITIES & OFFICE PARKS**

Ensure seamless access control with the Nimbus Visitor Management System (VMS). Whether processing visitors, staff, contractors, or deliveries, our solution secures every entry and exit efficiently and in real-time. With a focus on easy integration and compliance, VMS offers an all-in-one platform to manage site access, providing safety and operational control

## Challenges in visitor access management

Today's site managers face the challenge of balancing security, safety, and efficiency. Common issues include:

- 1 **Ensuring security and compliance:** Managing access for visitors, staff, contractors, and vehicles while adhering to safety regulations.
- 2 **Operational efficiency:** Avoiding delays at access points and minimising manual checks.
- 3 **Comprehensive monitoring:** Maintaining accurate data and license checks and ensuring only authorised individuals enter the premises.

## Streamlined solution overview

Our Visitor Management System (VMS) addresses these challenges through a fully digital, customisable, and adaptable system to include functionality from the below:

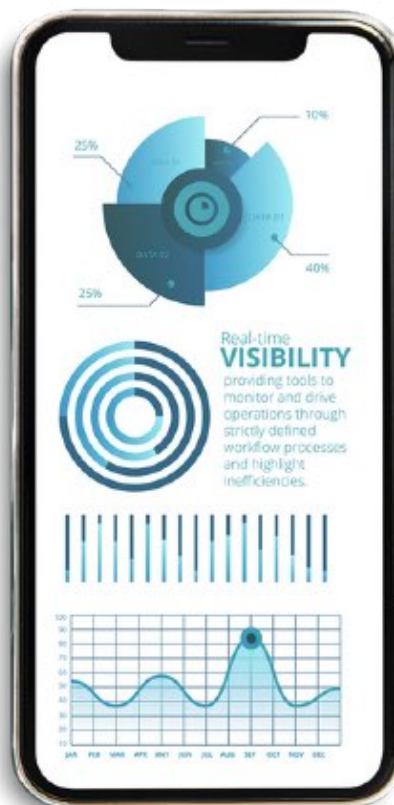

- 1 **Pedestrian access:** Efficiently manage pedestrian entry with ID scanning, appointment confirmations, and real-time alerts. Enhance security with features like blocked individuals and medical screenings.
- 2 **Vehicle management:** For vehicle entry and exit, Nimbus VMS facilitates quick checks via ID and license scanning, asset tracking, and health screenings. It supports vehicle pre-scheduling and real-time monitoring for better oversight.
- 3 **Fleet and contractor access:** Automatically capture driver and vehicle details to simplify fleet entry. Track assets, maintain health and safety compliance, and use real-time alerts to ensure only authorised access. For contractors, easy license scanning and digital signature capture streamline the process, ensuring full security and control.
- 4 **Delivery oversight:** Monitor all delivery activities with efficient ID scanning, tracking delivered items, and capturing driver details for seamless operations. Optional features like license plate recognition and pre-authorized PIN access improve security and efficiency.

## Key features and benefits

- **Comprehensive security:** Use ID, passport, or vehicle license scanning to streamline access.
- **Automated alerts and notifications:** Receive real-time updates for security breaches or unauthorised access attempts.
- **Health and safety compliance:** Track medical clearances and PPE requirements and enforce site-specific safety protocols.
- **Asset and destination tracking:** Record the movement of assets and visitors throughout the site.
- **Tailored for your needs:** Additional features like facial recognition, breathalyser integration, and license plate OCR can be added for enhanced security.

## Data and reporting

Gain full visibility into your site's security with Nimbus VMS dashboards and reporting. Track all transactions, see real-time visitor flow, and access comprehensive vehicle and visitor repositories. Optimise operations and ensure compliance with user-friendly analytics and alerts.

The Nimbus Visitor Management System (VMS) offers a secure, streamlined, and fully customisable platform to transform how you manage access control at your site.

**Our system adapts to meet your needs, whether they relate to day-to-day operations or unique security challenges.**

**Streamline access control without compromising on compliance, safety and security.**
